Tradition and Modernity in Veterinary Medicine (TMVM) is a scientific journal dedicated to upholding high ethical standards throughout the publication process. The responsibilities regarding publishing ethics of TMVM, for authors and peer reviewers are detailed in these guidelines.

Editorial Process

We are committed to maintaining editorial independence and preventing any violation of this principle, regardless of the circumstances. We do not tolerate discriminatory policies towards authors or reviewers. Our editorial process promotes fairness and equity at every stage of publishing process.

All publication proposals sent to us are checked for compliance with the aim and scope of the journal. After passing this stage and upon the declared confirmation by the authors that the article is not about to be published by another journal, it is sent to at least two independent reviewers in the relevant scientific field corresponding to the topic of the article. Within 14 days, they must return an answer to the editorial board, with a decision on whether they recommend that the article be published in the journal.

If one of the reviewers decides to reject the article for publication, the journal notifies the corresponding author of this decision by e-mail as soon as possible, attaching a detailed justification.

In the case of a positive decision by both reviewers, the journal will notify the corresponding author via e-mail as soon as possible, applying all corrections suggested by the reviewers to be made by the authors. The latter, within a period of 7 days, must make the appropriate corrections and send the corrected and final version of the article again to the e-mail of the journal.

A one-time extension of the period for returning a review by reviewers and making an article corrections by the authors is allowed only upon written notification to the e-mail of the journal.

Decision for acceptance of a manuscript is 8-12 weeks, including the time for reviews and corrections.

TMVM scientific journal is published biannual – first issue June-July and second issue November-December

Authorship and Contribution Information

From 2024, information about authors' ORCID codes, if available, will be added to all published articles.

All co-authors on behalf of the corresponding author confirm, by signing the Plagiarism Declaration, that the manuscript is their own work and that no third-party works or parts thereof have been used.

In case of differences in the contributions of the authors involved in the development of the proposed article, and to avoid the risk of conflict of interest, we recommend that they attach information about the individual contributions of the authors using the following guidelines: Writing the draft, Formatting the final version of the manuscript, Participation in the experiments, Collecting the materials, Performing the statistical analysis, Processing the results and the discussion.

Affiliations

All authors must represent the institution that presents them. As well as the institution(s) in which the research was conducted or which supports the same.

Plagiarism

TMVM does not tolerate the use or appropriation of other scientist's materials or works without the express knowledge and consent of their authors.

Each newly submitted manuscript is tested for plagiarism through the Strikeplagiarism platform before it is published. If the same is found, the article is excluded from print.

Human or Animal Research

All manuscripts which report in vivo experiments, clinical or epidemiological trials with humans or animals must include a written Statement in the Methods section that such work was conducted with the formal approval of the local human subject or animal care committees, and that clinical trials have been registered as required by international legislation.

Competing Interests and Funding

The authors undertake to provide information through a statement in the article in the presence of a conflict of interest of a financial, non-financial, professional or personal nature.

In the presence of external funding, authors should mention this in the article in the Acknowledgments section.

Freedom of Speech

In our role as a journal of scientific value, we encourage freedom of expression, but we do not tolerate the publication of false claims that may damage the reputation of cited authors or organizations.
